Modules AutoCAD's library includes a number of pre-built functions (called "modules") that allow users to perform complex tasks easily. Modules are usually separate applications that allow users to complete a specific task in AutoCAD. For example,

IES WebViewer allows users to easily view AutoCAD files on a web browser. However, there are also a few basic modules available in the default AutoCAD install. In addition to being used as pre-built modules, AutoCAD's API makes it possible to create modules using any programming language. Autodesk Exchange Apps In addition to creating full AutoCAD applications using its own API, AutoCAD has a number of AutoCAD Exchange Apps available on the AutoCAD Application Store. These applications are meant to interact with one or more of AutoCAD's data formats. These applications can be downloaded and used with any AutoCAD system and do not require AutoCAD's installation. 3D Pipeline The Autodesk 3D Pipeline is a feature that allows the user to store information about one or more projects and then create reports or presentations based on the project. The information stored is contained in a series of drawings. The interface is intended for data that does not change often and is read-only (not even by the same user). A single 3D Pipeline drawing can contain multiple Revisions. Each Revision contains the same information, but allows for different visibility and user preferences. The user can create multiple Revisions and customize the 3D Pipeline drawing for each one. These individual Revisions can be created and saved in batch, allowing for automated maintenance of the information. For example, the user can create a 3D Pipeline drawing, customize one Revision, save it, and delete the Revision. Then, in another session, the user can select that Revision again, customize it, save it, and delete it. The user can repeat this process until all Revisions have been saved. The user can also compare multiple Revisions to identify differences. This comparison can be performed by comparing two Revisions side by side or using two different "views" of the Revisions at the same time. The 3D Pipeline drawing is stored in the Autodesk 3D database. The 3D database allows for multiple objects to be stored, allowing the user to create their own lists and views. 3D Warehouse The Autodesk 3D Warehouse is a database containing some of the information 5b5f913d15

What's New in the AutoCAD?

Extending the Power of Manuscript: Manuscript can now connect to a network or file server. With Manuscript, you can use desktop applications and cloud services to create, access, and work with CAD drawings on your Windows, Mac, or iOS device. Creating and Editing 3D Drawings: With these tools, AutoCAD is more like other software tools you are already using. You can draw a 3D model right from the 2D view of a 2D drawing, an elevation, or a profile. You can edit the 3D model, while it is viewed in AutoCAD. (video: 1:24 min.) Performance: Up to 30% performance boost for using existing display modes when you're working with a large drawing. Always up to date: AutoCAD updates are always available for download. New results in output and print: Users now have improved results when viewing and printing AutoCAD drawings. (video: 1:50 min.) Introducing .NET framework for Win32: Win32 applications now run with greater stability and performance. In addition, AutoCAD is now an .NET framework application, simplifying deployment and development of new Win32 applications. (video: 1:25 min.) Automatic 2D alignment: Automatically aligns 2D objects (lines, circles, text, and annotation) to drawings when you place them. This new feature may be noticeable when you place several 2D objects in a row. Zooming and panning: For the first time, you can pan and zoom throughout a drawing, whether it is a 2D drawing, a 3D drawing, or a drawing that combines 2D and 3D objects. Accessing web services: You can view and work with CAD drawings remotely and access AutoCAD directly from a web browser. Automatic number formats: You can assign a formatting property to a field or column to automatically display numbers in any format. Advanced fillet and arc tools: You can fillet or arc the sides of a polyline, circle, arc, or ellipse. You can also create a shadow on an arc or ellipse. Show objects as they would appear to real eyes: You can highlight, mark, or label an
