For Digital DJ'ing: "Jackson" is the perfect software to create, remix, and perform any type of DJ'ing session. Features include: ⬚ Mixing: Jackson lets DJs perform complex mixing tasks. While playing any track, the DJ can dynamically swap tracks and parts of tracks, e.g. by repeating and reversing part of the song. This can be done by moving the mouse over the respective track. ⬚ Remixing: Any DJ can create remixes from the library of ready-made remixes. Using these remixes the DJ can instantly prepare a new version of any track. ⬚ Sequencer: All tracks of a song have their own playback time and can be repeated, skipped, reversed, or repeated and reversed at the same time. ⬚ Bookmarks: The DJ can easily save any given set of tracks for later usage. ⬚ Library: The DJ can browse his/her library of remixes. The search function allows the DJ to find tracks from the library that match his/her preferences. ⬚ Built-in Mapper: Any track can be analyzed by the DJ to find a suitable beatmatch for it. If a beatmatch can be found, the DJ can press the appropriate buttons on the mouse to get that track in perfect sync with the other tracks of the set. ⬚ Built-in effects: The DJ can tweak any track to his/her liking with built-in effects, e.g. equalizer, chorus, and echo. All these settings are available via the built-in mixer. ⬚ Built-in recorder: The DJ can record his/her set using the built-in recorder. The settings of the recorder are controllable via the built-in mixer. ⬚ Built-in metronome: The DJ can practice his/her skills in realtime. The metronome can be turned on and off. ⬚ Built-in Midi interface: The DJ can use any midi-interface (including a computer keyboard or midi controller) to control the built-in mixer. This allows the DJ to perform realtime control of his/her set. ⬚ Built-in audio controller: The DJ can use a MIDI controller to control Jackson. The controller can be used in two different modes: record (or playback) mode and control mode. In record mode the controller generates midi notes that control the playback

What's New in the Jackson?

* The Right Tool for the Job (QC, parsing, generating) * Simple to use (one line to write a value) * Be Synchronous (asynchronous isn't a problem for most) * Don't get confused by Double Objects (no nesting/array/list...) * Very fast to parse * Write easier (useful when you have an object or a complex object) * Single source of data (no DB, nor any external libs) * Multi-format JSON (Java, XML,...) Jackson is a very fast and easy-to-use library. It has few dependencies and is almost a no-brainer to use. It does everything you'd expect from a JSON parser and binder (databinding, validation, etc..). Jackson Release Schedule: Jackson is released on the first Tuesday of every month. The next release is expected to be on Tuesday, November 21st, 2011. The development version can be downloaded from its main site. The next release will be available on the site soon after the current release. Jackson Website: Jackson can be downloaded from its main website, which you can find at It can also be found in the Maven Central Repository.
