Smart Cover Art Free Download is an application that can search for movie posters and album covers and use them as covers for songs and movies. The program allows you to import all video and audio files in a folder and edit file tags with an easy-to-use interface. A lightweight Open Source app that can search for images on the web and give them the right names Geeqie is a lightweight Open Source app that can search for images on the web and give them the right names. The application has a clean and clutter-free interface, and it does its job fast. Geeqie's search function is quite powerful, and it can search the entire Internet and download images to your computer. One issue, though, is that the app can only download images, and it cannot resize them. For this reason, you will need to manually add them to your Pictures folder. The application's interface is simple and intuitive. It is clear that Geeqie was designed to provide a fast way to search for images on the web. However, we found it to be quite simple and intuitive. The program only requires one click to open a browser window and start the search. Once the results appear, it is easy to select the ones you want and save them to your computer. Adding media to your collection The tool is not an extensive image organizer, but it can find and display images on the web. The results can be resized and saved to your Pictures folder. Unfortunately, the app doesn't let you search for images by size and quality. Instead, you have to manually adjust these settings and modify the search terms. Overall, Geeqie is a lightweight and intuitive app that does its job quickly. It can search for images on the web and save them to your computer. It can also add media to your pictures folder and resize them, but the user interface could be a bit more user-friendly. Outdated and somewhat unresponsive interface While some users may appreciate Smart Cover Art's visual design, we found it to be quite disappointing. However, multiple skins are available, and one of them may be to your liking. Sadly, the application responded to commands rather slowly during our tests, even though our system meets the listed hardware requirements.
