The key elements of HyperMotion Technology are: Power-up Strikes: Players make spectacular, full-movement, off-ball acrobatic plays to keep defenses guessing while staying on balance. Successful moves with the ball see the player score a goal, assist or create a chance for his teammates to score. Running and Catching: Players dash with the ball to get in position to pass or shoot, before running or turning and attempting a jump shot or cross. Players controlled by CPU are more suited to running around with the ball and attacking, while players controlled by human players use their natural athleticism to attack with and score with the ball. Close Control: Players in close situations need to use their footwork to control the ball. Players can make decisions such as dribbling to pass, shooting or shooting directly with their feet. Subtle Moves: Players make subtle one-touch passing moves that beat defenders and trick them into committing fouls. Players can be in the perfect position to pass or receive the ball at any moment as FIFA creates the right pass for the right moment. 1 v 1 Skill Moves: Players have access to an advanced set of one-on-one moves that continue to improve based on player skill and intelligence. These moves require skill, intelligence and timing to exploit. Real Player Movement: Positions and limb movements are based on thousands of hours of real player motion captured, allowing players to move, run, jump, tackle and position themselves naturally. Players can run to receive a pass, use footwork to turn and shoot, or switch directions naturally while maintaining control of the ball. Performance vs. Skill Mapping: Players can earn, save and modify their custom attributes, attributes for all game modes, and the attributes and attributes of all players and clubs. In-game presentation: Players talk, act naturally while their movements are guided by intelligent AI. INI settings and Player Loadout features: Players can choose specific “moveset” attributes including Stamina, Vision, Acceleration, Balance, Braking, Agility, Reactions, Speed, Directness, Creativity, Shot Power, Shot Accuracy, Pass Accuracy, Ball Control, Shot Power Control, Shot Accuracy Control, Dribbling, Workrate, Intelligence, Strength, Stamina, Stamina Regeneration, Fitness, Running Speed, Jumping, Mid-Air Jump, Counter-Attack, Trapping, Hold-Up,

Fifa 22 Features Key:

- NEW “Arcade-inspired” FUT Mode: 12 new FUT modes for career and multiplayer, consisting of high-octane games that can be played when you have 30 minutes to spare, and more if you have 60 minutes.
- Deeper, more intelligent AI than ever before. AI has been improved using a learning system to unlock complex behaviours and better mimic real-life players. Players adjust their moves based on factors, not just how good they are: learn new behaviours, don't follow the general trend, and be unpredictable. The timing and intensity of ball and player movement have been improved, and they react to each other more realistically. Player movements are more nuanced, intelligent, and responsive. Players will change their running style based on the situation, having greater awareness.
- POWER-UPS: Attacking players get a burst of speed, stamina, acceleration, and more. Defensive players keep the ball carrier under pressure with a burst of strength and take the ball with more power. These player enhancements give your performances more punch. Players can gain a boost to their favourite skills, and those skills then permanently improve once the player reaches a certain level. Every player gets a series of attributes to decide which power-ups will be activated as they reach new achievement levels.
- DYNAMIC ANIMATIONS: Players have an improved animation system that looks cool, flows smoothly, and reacts to the ball, and postures and facial expressions mean reactions are more expressive. Completely revamped dribble moves and tackle animations give us something completely new and better for in-game gameplay. Every player now has a special open animations sequence when performing those moves to further highlight their unique style.
- NEW BREAKS: In career mode, situations occur that might lead to free kicks, corners, and open rebounds. When ball touches the ground, every player moves as if with a controlled jump.
- NEW COMPLETE DAMAGING SYSTEM: Passes, shots, and tackles hit with force. They are now stronger, crueller, and much more dangerous.
- NEW TEAMWORK: Reactions between players change depending on the way their roles are assigned to communicate to teammates, adding to the reactive feel of the game.

FIFA is the world's most popular football video game franchise. Since its release in 1991, the series has experienced more than 50 million digital sales and has been translated into 40 languages worldwide. Gameplay FIFA's football franchise has been synonymous with close-to-real football for over two decades. FIFA blends the beauty of the game's signature visuals with EA's unrivaled game-play innovation. Moving beyond its own core progression systems, FIFA now captures and delivers the intimacy, excitement, unpredictability and emotion of the sport that matter to millions of fans around the world. Evolved gameplay With an improved player model, more artful animation and a new player intelligence system, FIFA tackles some of the most pressing gameplay challenges in football video games. Players now spring into action with an improved player model, more artful animation and a new player intelligence system. More control The user experience is the single most important way FIFA stays true to the grass-roots culture of football. As a result, FIFA continues to emphasize game play as the most important driving force of the sport. FIFA now places more emphasis on intuitive controls and eliminates as much AI meddling as possible, resulting in more control for the player. Improved ball control The most sophisticated ball-control system yet includes a new improved deceleration mechanic, more accurate and stable shot accuracy, and more realistic flight characteristics to provide great ball control and control over the pace of the game. Fine tuned shooting FIFA's shot mechanic was challenged by some of the most pressing and complex areas of the game. Following a detailed analysis of hundreds of thousands of shots from games around the world, FIFA has reworked player shot direction on both the run and pass to provide better results. This improves ball control and delivers more authentic shots, and also improves the animation of the player's shooting technique. All-new tactics FIFA takes the most popular tactics from the football world and gives them a new level of interactive intelligence. FIFA now understands the setup and formation of teams, making tactics more powerful and unique. Players can also create and switch to different tactics during a game. Referee decision engine In previous FIFA games, the referee made his decisions based on the fouling of the players. With FIFA 22, the referee now also considers the player's technical ability, strategy, and the meaning of the foul.
