Like most of the free registry cleaners available at the moment, it does a very good job at locating hidden files and folders. The only thing that can be criticized is that it does not have very good looks. This is not a surprising fact, since it was made by a small group of developers. Nevertheless, it has some interesting features that are worth taking a look at. For instance, the application can automatically create an on-screen map of the target, searching for files and directories throughout your hard drive. Basic functions The program is launched in a standalone setup wizard by default. It features a very simple, straightforward interface that is divided into various tabs that offer access to different types of functionality. The main window shows a map with the target selected, along with an up-down arrow and information about the results found. A small label acts as the filtering tool, and all entries are marked with the information that was used to find them. When you click the up arrow, the main window changes and the files are listed in a sub-window with additional details about them. It also shows a button in the right side called 'View' that opens up the original window, showing the contents of the selected directory in a small tab. Dowser can also be used to locate files and folders directly from Windows Explorer, by pressing CTRL+F. The screen will open and you can just type in the name of the file you are looking for. When you press ENTER, Dowser will find the file in less than a second. Using Dowser with maximum effectiveness Although it looks simple enough, Dowser is capable of doing much more than just finding files and folders. The program is powered by multiple tools and it can act as a standalone program or as a plugin for various programs. Baseball isn't the only sport at which well-known athletes have been injured. In the NFL, the 2008 season is marked by concussions, and in professional soccer, there are frequent head injuries. But among the myriad dangers that players face in the NFL is the fact that the Game Officials Association and the league are increasingly concerned about the players' ability to think when they are thinking they are supposed to be thinking. Baseball's problem is not unlike that of Major League Soccer (MLS), according to Michael McCann of the Wisconsin Law Review. McCann is an associate professor of law at Marquette University, a former commissioner of the National Federation of State High School Associations and author of the book "The Path of Least Resistance: The Politics of Sports, Democracy, and Power." McCann says that prior to the advent of MLB testing for traumatic brain injury, baseball Commissioner Rob Manfred was reportedly "not terribly concerned about the integrity of the game" and that Manfred thought players with concussions weren't "making it any worse" by playing. But the testing regime

that MLB wants to implement will lead to players being "evaluated not just for their physical but also for their mental health," McCann said. "There has been a huge shift over the past 10 years in the way the game is played. It's not as physical as it once was, which is why we get injuries. It's also why there is more emphasis on strategy.... I don't believe there was a more painful time for the game of baseball than the past 10 years." McCann pointed to the jump in MLS draft picks in recent years. Teams have also increased the number of draft picks they offer to foreign leagues. "MLS
