Adjust PC volume with your mouse, without raising or lowering it... The main downside is the fact that it cannot be used for applications where you'd typically use volume keys, for example for opening menus and other actions that require audio. It can't be used as a toggle either, and doesn't let you choose how to make the adjustment. These are some things that you can't usually expect from a single program. A more Sony experience? Something completely unique? Volume Scroller is a small, easy-to-use program that runs in the system tray and enables you to control the system volume by placing the mouse cursor over its icon and scrolling up or down. Whether you wish to increase or decrease the volume, you just need to move the mouse cursor over the app's tray icon and scroll up or down. Additionally, you can mute all sound by left-clicking the icon. A clutter-free app with a fresh look and a good design With the aim of reducing the clutter in users' system tray, Running Wheel icon is an unusual way to bring changes in the way you control your PC. This simple app, which has been designed to replace the "Winamp" system tray, adds some mouse-wheel functionality and lets you quickly control the volume by scrolling. Click the icon and all audio will be automatically stopped, or you can use the right and left arrow keys on your keyboard to adjust the volume. With Running Wheel icon, you will be able to enjoy Windows media in a much improved way, as the app hides the standard player, tweaks the default configuration and adds mouse control to the equation. It makes it easier to change the volume and mute the sound, and it is not all. Not only that, but it is also a much better-looking alternative to the icon you may be currently using. For example, when you install Running Wheel icon, you'll see a pretty blue palette dotted with audio-related items. When you launch the app, you will notice two icons in the system tray; on top of them is an adjustable volume meter. The control's default setting is the standard volume level, but you can change the step size too. To mute the sound, you can use the right arrow key, and to adjust the volume, you use the left arrow key. This means that you do not need to switch tabs and use the space bar. It is also possible to mute all sound by pressing the space bar, and if you wish, you can also display the volume meters on the panel bar. The application comes with a few skins, too, including three blue themes, so the setting could be changed to your liking. If you find the volume control by the running wheel system a little bit too distracting, you can use this app, which also changes the taskbar's icon to look like the one that belongs in the taskbar or desktop.
