File2Code URL: Testimonials: "A command line program to convert binary to decimal or Hexadecimal." This application really serves a purpose to assist a programmer. Since using the application, I now have a better understanding about the file format and FileHeaders I just wanted to let you know I have been very pleased with your tool and it has greatly improved my ability to program. I use it every time I write code. When I finally managed to succeed in getting my.Net application to work, I used your application to convert my application's header file to a binary file. If it wasn't for your application, I would not have known where to look for the data. Thank you so much for your terrific utility. What do you do with all the binary data? I'd like to give you a testimonial about it. I am a software engineer that uses File2Code for a lot of things I'm a software developer and a programmer. I've been using it to write files for my applications "I have used the application numerous times while writing data into files. It has provided a great service for me. What's New in the File2Code?

-- File2Code (f2c) is a command-line utility that converts binary data into decimal (or hexadecimal) strings. It's easy to use and quick, even with a fast computer. .File2Code Language : C .File2Code License : Copyright (C) Ryan Smith 2008 .File2Code Version : 1.1 .File2Code Website : .File2Code Description: -- First off, thanks to those who sent me email telling me what they liked or didn't like. I've used this program in the past to convert binary data files into computer readable formats and everything worked as expected. I built this as a quick and simple utility to convert binary files into text or hexadecimal strings. Usage: If you have a binary file called test.txt and want to convert it to a string, enter: f2c test.txt or f2c -o test.txt test.txt If you want to read a hexadecimal string from a binary file, enter: f2c -o test.bin test.txt Note: if you are converting data from a binary file, the line.length variable will be incorrect Please enter the binary file you want to convert, and the output file. Example (assuming test.txt is in the same directory): C:\>f2c test.txt or C:\>f2c -o test.txt test.txt or C:\>f2c -o test.bin test.txt or C:\>f2c -o test.bin test.txt (Optional) Please enter a comma seperated list of decimal numbers to be used as an offset into the data. This number will be used for the first hex character in the resulting file. If you do not enter this parameter, then the first character in the file will be used as an offset value. Example (assuming test.txt has an offset): C:\>f2c -o 0 test.txt C:\>f2c -o 1 test.txt C:\>f2c -o 2 test.txt C:\>f2c -o 12 test.txt The following output can be seen. Index 0 = 0 Index 1 = 1 Index 2 =
