In the example below, both columns return a value of 6, but I'd like to use a function so that if there are zero results in one of the columns, it doesn't return a zero value. This is what I've been working on so far, but I'm not sure how to determine if the column doesn't have any numbers (empty or 0) in it, because you can't just compare a series of numbers to itself. A: This is a pretty straightforward problem. Just do a MAXIFS() combined with ABS(). =MAXIFS(A:A,A1,B:B,B1,">6") This will return 6 in your example. But if you don't want the last >6 to win, then look at how you define ">" >6 means greater than 6
