On that cell there is a scrollview. Right now I am getting an NSRangeException error because when I run the code. It goes right to the line that states: scrollView.contentSize = CGSizeMake(320, 900) It crashes and I get this message in the console: \*\*\* Terminating app due to uncaught exception 'NSRangeException', reason: '\*\*\* -[\_\_NSCFConstantString substringWithRange:]: Range or index out of bounds' It seems to be looking for an index 0 and it can't find it. So I tried getting rid of that but then it prints out a bunch of other stuff and throws the same error on the next line. I've tried searching around for a solution but I can't seem to get any working. Thanks EDIT: OK now I'm getting a different error: \*\*\* Terminating app due to uncaught exception 'NSRangeException', reason: '\*\*\* -[\_\_NSCFConstantString substringWithRange:]: Range or index out of bounds' \*\*\* First throw call stack:
